CARE AND
MAINTENANCE

MARMOTEX

■ The countertop 100% in natural stone

K-PROOF® is the kitchen countertop made of 100% natural stone which guarantees the maximum of the hygiene and it is entirely stain and water proof. It is resistant to food products (such as coffee, wine, lemon, vinegar, oil, etc), to abrasion and scratches, to thermal shock and it is not subject to change of colour over time. All these features make the kitchen countertop **K-PROOF®** a unique product of its kind.

■ Daily Cleaning

For the daily cleaning of the top **K-PROOF®** you just have to use hot water and a microfiber cloth or a non-abrasive sponge, till the stain is totally removed, then dry the top with a soft cloth.

■ Cleaning of difficult stains

The general recommendation is to clean the top immediately after every use, in order to avoid the origin of difficult stains.

For the extraordinary cleaning of the **K-PROOF®** top, like stains generated by fatty or other kind of foodstuffs leftovers, Marmotex has developed **K-NEAT®**, the special product for the maintenance of the beauty and the hygiene of the material.

In the absence of **K-NEAT®**, we recommend to use neutral and non-aggressive degreasing cleansers, treating firstly just a little part of the top to verify its real effectiveness.

Leave the product for maximum 2 minutes and rinse plentifully with clean water. We also recommend to clean at first the top with hot water and a soft cloth.

■ Calcareous stains

Use a non-corrosive and vinegar based anti-calc detergent, treating firstly just a little part of the top to verify its real effectiveness.

Leave the product for maximum 2 minutes and rinse plentifully with clean water. We also recommend to clean at first the top with hot water and a soft cloth.

■ Silicone and Plasters residues

We recommend to remove these products immediately after the installation of the top; do not use sharp and/or abrasive objects, which could scratch and damage the surface of the **K-PROOF®** countertop.

■ Warning ⚠

Do not use:

- Bleach, deeply alkaline products like bicarbonate of soda and corrosive products;
- Corrosive/condensed anti-calcs;
- Solvent based products like acetone, white spirit and diluents;
- Wax based products or other polishing additives.

Please always read carefully all the instructions before using any product: the bad usage could damage the surface.

K-PROOF® care is easy. If you have any doubt or any particular need we are at your total disposal to give you all the required information you need.
